

Task 1 Summary Report: Data Cleaning and Preprocessing

Internship: Elevate Labs Data Analyst Internship

Dataset: Netflix Movies and TV Shows Dataset

Objective

The objective of this task was to clean and preprocess a raw dataset by identifying and resolving common data quality issues such as missing values, duplicate records, inconsistent formatting, and incorrect data types.

Data Cleaning Steps Performed

1. Dataset Understanding

Loaded the dataset using Pandas. Explored the dataset structure, dimensions, column information, and reviewed data types.

2. Duplicate Check

Checked the dataset for duplicate records and removed duplicate rows to ensure data integrity.

3. Missing Value Handling

Identified and handled missing values in columns such as Director, Cast, Country, Rating, and Date Added.

4. Column Standardization

Standardized column names by converting them to lowercase and replacing spaces with underscores.

5. Text Data Cleaning

Removed leading and trailing spaces from text-based columns and ensured consistent formatting.

6. Data Type Validation

Converted the Date Added column to datetime format and verified appropriate data types.

7. Final Data Quality Check

Rechecked the dataset for remaining null values and duplicate records.

Outcome

The Netflix dataset was successfully cleaned and transformed into a structured and analysis-ready format.

Tools Used

Python, Pandas, Jupyter Notebook

Deliverables

Raw Dataset, Cleaned Dataset, Data Cleaning Notebook, Summary Report
